FULL TIME- NVIDIA

ASSOCIATE PROMPT ENGINEER Present

- I specialize in fine-tuning and optimizing NeMo (Large Language Model) to enhance its performance across various domains, primarily focusing on image processing tasks and code generation. My work ensures the model delivers accurate, coherent, and contextually relevant outputs.

FREELANCE - SOUL AI

LLM ENGINEER July 2024- September 2024

- I fine-tune, and optimize large language models like Flamingo and Bulba coding to enhance their performance in processing tasks, ensuring accurate, coherent, and contextually relevant responses.

INTERNSHIP - MENTORNESS

ML AND AI INTERN June 2024-July 2024

- Working on regression tasks, NLP, feature engineering, and machine learning model development.

DATA ANALYTICS INTERN May 2024- June 2024

- Analyzed diverse datasets utilizing Excel, SQL, and Power BI, leveraging each tool's unique capabilities for comprehensive data analysis and visualization.

PROJECTS

WAY TO NPTEL

Python and shell scripts are used to extract data from the NPTEL website. A shell script utilizes ffmpeg to convert MP3 lectures into WAV format, facilitating in-depth analysis and exploration of the acquired content. Technologies used:Python, Web Scraping, Selenium

FINANCE DATA ANALYSIS

Conducted comprehensive financial analysis on multiple banks by extracting data directly from the web, enhanced with interactive visualizations (Python) to illustrate key trends and insights.
Language:- Python (Numpy, Pandas, Matplotlib, Seaborn, Plotly, Cufflink)
