SKILLS

C++ Python

Data Structures and Algorithms

Problem Solving

Machine Learning

Data Bricks React.js

Node.js Mongo DB

scikit-learn SQL

ML flow JavaScript

Software development

MySQL NoSQL

Machine Learning

Statics Data Analysis

COURSE WORK

AI in healthcare

Internet of Things

Microprocessor

Information theory and Coding

EDUCATION

Bachelor of Technology

International Institute of Information and Technology, Bhubaneswar

08/2019 - 06/2023

GPA 7.85

Courses

- Electronics and Communications

EXPERIENCE

Analyst (Data Science)

Tiger Analytics

09/2023 - Present

Hyderabad, India

Achievements/Tasks

- Conducted exploratory data analysis (EDA) to uncover patterns, trends, and anomalies within datasets, utilizing various statistical techniques, including hypothesis testing, and visualization tools to derive actionable insights
- Employed preprocessing techniques such as data cleaning, feature engineering, and normalization to ensure high data quality and suitability for further analysis and modeling.
- Developed and implemented machine learning models, including Lasso regression and Bayesian regression, to predict outcomes, optimize processes, and drive decision-making. Utilized Azure Data Bricks and Azure Data Factory to streamline data workflows, automate data pipelines, and facilitate efficient data processing and manipulation in cloud environments.

PROJECTS

Brain tumor detection and classification using Convolutional Neural Network -

- Designed a CNN model as my **final year academic project** which predict the class of the tumor and also detect the tumor region from a brain MRI image with an **accuracy of 93% and label confidence of 99%**.
- Applied image **preprocessing methods(adding median filter for noise removal and histogram equalization)** before train the model.Used **CNN** For predict the class and **R- CNN** detect the region of the tumor.
- Used **python** ,**Tensor Flow** and pandas library for implementation.

A daily Journal Website (06/2022 - Present) [↗](#)

- [anshpanda09/Web-dev-pd \(github.com\)](#)
- Designed a daily journal website using **HTML, CSS,Java Node.js, Java Script ,Express js and Mongo db**.
- Every users can create their own accounts and add,edit and delete their posts.
- Worked on login,sign up and password hashing features.

A food order site (06/2022 - Present) [↗](#)

- <https://github.com/anshpanda09/food-order>.
- It is a food order site designed using **Java Script react.js and firebase**.

ACHIEVEMENTS

Rank 534 in google hashcode 2022 (04/2022 - Present)

Secured Global Rank 534 in Google Hashcode 2022.

Finalist at Airbus Aerothon 5.0 (05/2023 - Present)

Shortlisted for Grand Finale of Airbus Aerothon 5.0

Cleared 2nd round of Ode to Code(Xiom) 2021 (09/2021 - Present)

Cleared **MCQ and Online code challenge** 1 round in Ode to Code.

Cleared 2nd round of Uber hacktag 2021

Cleared **MCQ round and online coding challenge** in Uber hacktag 2021.

3 star(rating 1685) in codechef

<https://www.codechef.com/users/anshpanda09>

Solved more than 600 problem in leetcode (03/2021 - Present)

<https://leetcode.com/anshpanda09/>
